

Culligan's FREE water analysis

As your local Culligan dealer, we have been providing problem water solutions for over 25 years.

We start by providing you with a solution to your water problems by performing a free water analysis at your convenience, in your home or business.

Your water will be tested on-site for:

- Iron
- Manganese
- Hardness
- pH
- Hydrogen Sulfide
- TDS
- Color
- Other testing is available

We share our results with you so that you understand exactly what causes the water problem and to provide all the information you need to make an informed decision on how best to correct your particular situation.
